Modernisation and new construction.

An important element of the project comprised the modernisation and new construction of nine bridges, nine railway underpasses and two signal bridges. Three of these railway bridges were realised by different methods: a new bridge construction (underpass) with a tube length of 15.2m, a new construction with a poured reinforced concrete layer of in-situ concrete on piles, and a new construction of a single-span bridge made from concreted steel girders across a double-track line.

Impressions

Image notes

1

Access made easy.

The project included, among other things, the construction of new tunnel access points.

3

Good connections.

2

Modern rail travel.

PORR's works represented an important contribution to the overall renovation of the railway line.

4

Diversity in implementation.

One of a total of nine bridges renovated or newly constructed by PORR in the course of the project.

The bridge constructions were realised by various different methods.
